

What

Environmental forecasting

Why

Our strength ...

- ... research ...
- ... operations ...
- ... services ...
- ... high resolution ...

How

Develop a capability to model air quality processes from urban to global and the impacts on weather, health and ecosystems

Implement climate prediction system for subseasonal-to-decadal climate prediction

Develop user-oriented services that favour both technology transfer and adaptation

Use cutting-edge HPC and Big Data technologies for the efficiency and user-friendliness of Earth system models

Earth system
services

Climate
prediction

Atmospheric
composition

Computational
Earth sciences

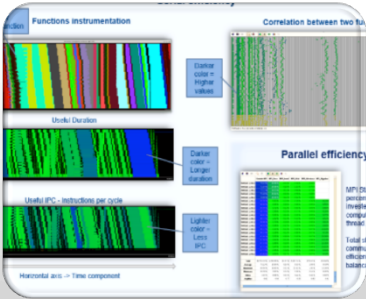

- Multidisciplinary team with different IT profiles

- Currently, 17 members

- 2 Managers
- 10 engineers
- 2 Postdoc
- 1 PhD student
- 1 Master student
- 1 Intern

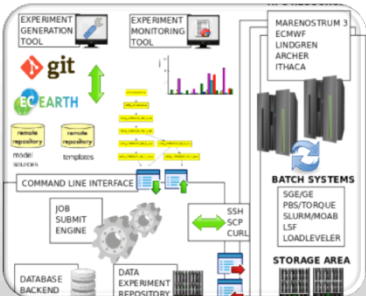

- Foster internal BSC interdepartmental collaboration, specially Computer Science to apply their research

Performance Team

- Provide HPC Services
- Apply new computational methods

Models and Workflows Team

- Development of HPC user-friendly software framework
- Support the development of climate and atmospheric research software

Data and Diagnostics Team

- Big Data in Earth Sciences
- Provision of internal and external data services
- Visualization

- Mainly competitive funds (FP7, H2020)
 - Projects from Climate or Atmospheric Sciences
 - SPECS, PRIMAVERA, RESILIENCE, CALIOPE...
 - Computational Earth Sciences projects
 - IS-ENES2
 - ESiWACE
- Collaborations with other research institutes or institutions
 - ECMWF, IPSL, CERFACS
 - AEMET
 - NCEP

- Internal collaboration with Computer Science department
 - Performance tools
 - Programming Models
 - Workflows and Distributed Computing
 - Storage systems
- Applying CS research to Earth System models
 - Porting ESM's to OmpSs
 - Deploying ESM's in novel architectures
 - Porting workflows to new tools

OCHOA

OUR CHALLENGES

Some challenges

- Earth System Models are NOT easy to use
 - Sometimes hard to develop
 - Sometimes hard to deploy
 - Sometimes hard to run
 - Sometimes hard to work with produced outputs

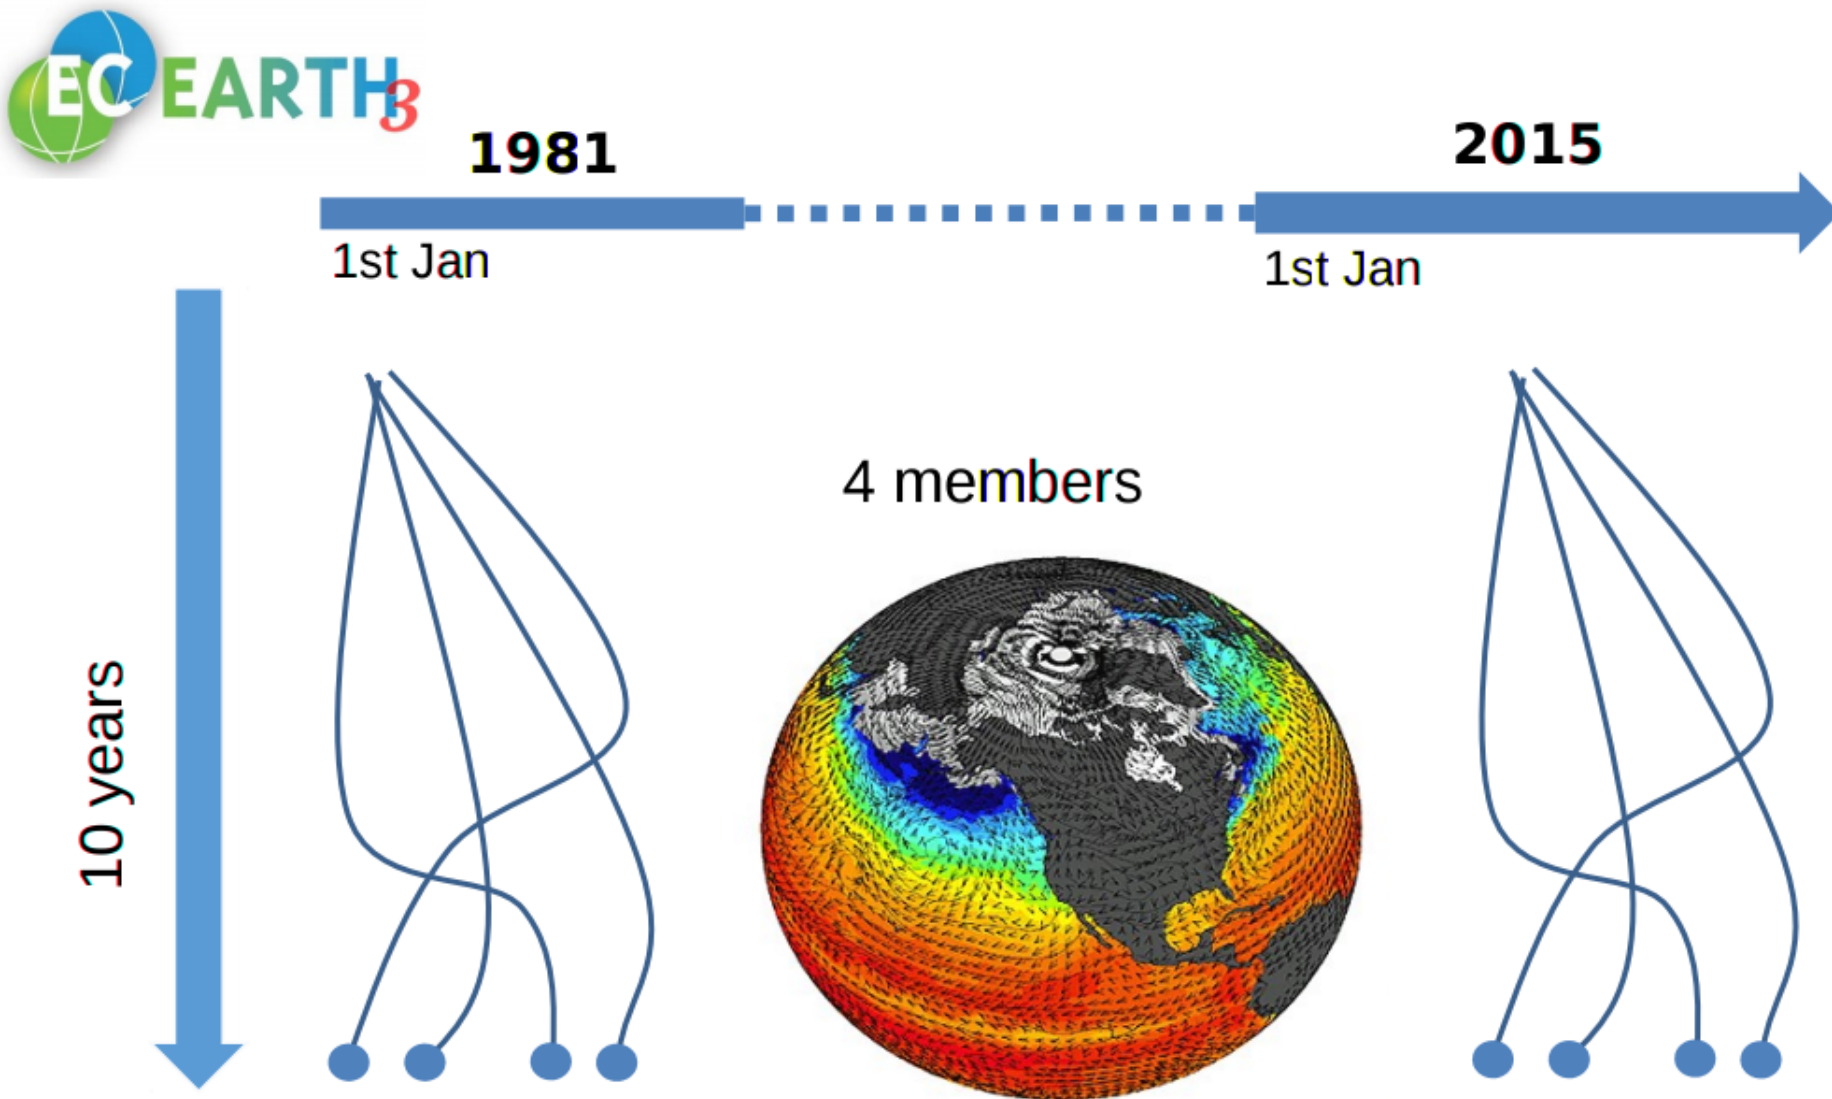

- Deploying a gitlab server
- Developing a unit testing strategy (for some projects)
- Continuous training scientists to use these tools

- EasyBuild is a software build and installation framework that allows you to manage (scientific) software on High Performance Computing (HPC) systems in an efficient way
 - <https://hpcugent.github.io/easybuild/>
- Developed for libraries and general purpose software
 - Handles dependencies and modules
- We ported to our models and libraries (work in progress)
 - NEMO/3.6-r6664-foss-2015a-BSC
 - XIOS/r858-foss-2015a
 - NMMB-BSC/2.0.4-foss-2015a
 - ESMF/7.0.0-foss-2015a

Running a decadal experiment

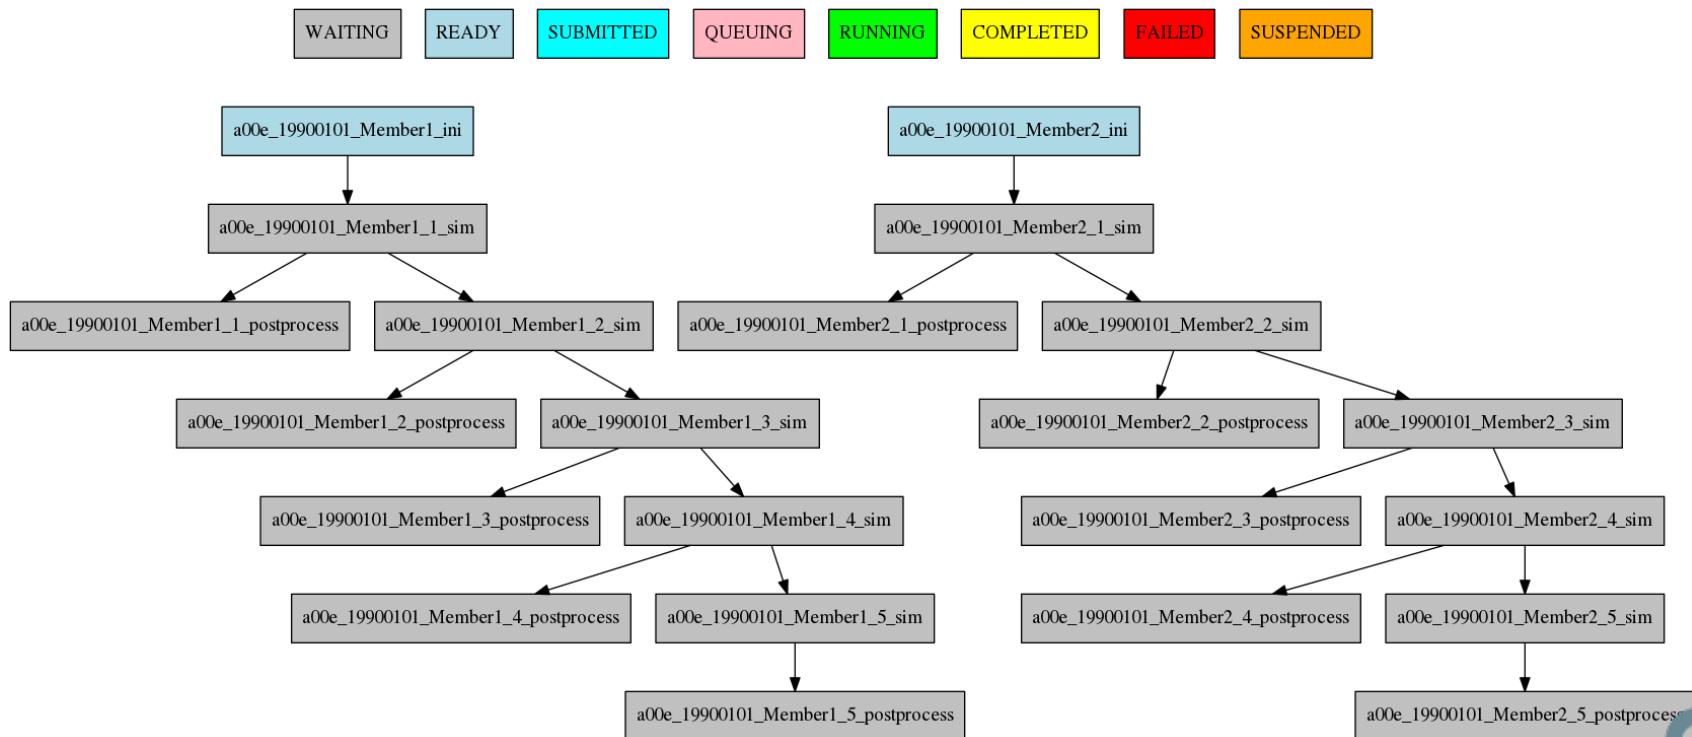

Barcelona
Supercomputing
Center
Centro Nacional de Supercomputación

- Autosubmit

- A versatile tool to manage Weather and Climate Experiments in diverse Supercomputing Environments
- <https://pypi.python.org/pypi/autosubmit>

- Automatization: Preparing and running, postprocessing and output transfer, all managed by Autosubmit. No user intervention needed.
- Provenance: Assigns unique identifiers to each experiment and stores information about model version, configuration options, etc
- Failure tolerance: Automatic retrials and ability to repeat tasks in case of corrupted or missing data.
- Versatility: Currently runs EC-Earth, NEMO and NMMB/BSC models on several platforms

- s2dverification

- Set of tools to verify forecasts through the computation of typical prediction scores against one or more observational datasets or reanalyses

- Supports datasets stored locally or in ESGF (OPeNDAP) servers.
- Exploits multi-core capabilities
- API available
- Collects observational and experimental datasets stored in multiple conventions:
 - NetCDF3, NetCDF4
 - Supports specific folder and file naming conventions.

s2dverification package

BASIC STATISTICS

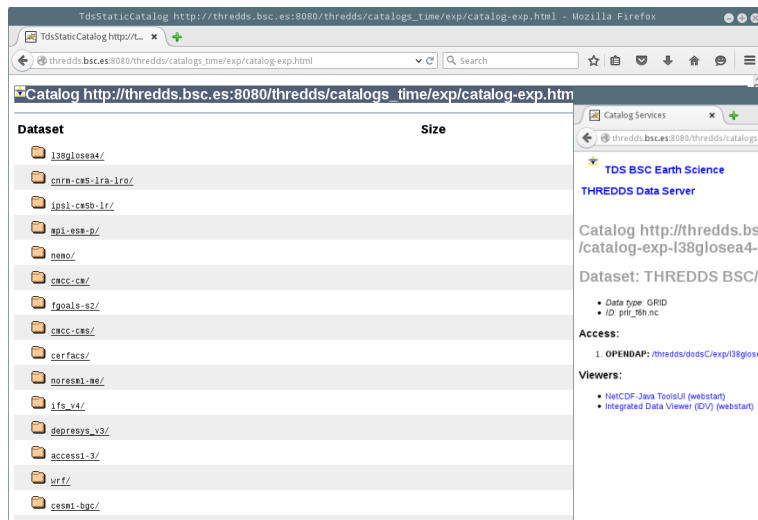

SCORES EXTREMES

PLOTS

Anomaly Correlation Coefficient. 10M Wind Speed ECMWF S4 1 month lead with start dates once a year on first of November and Era-Interim in DJF from 1981 to 2011. Simple bias correction with cross-validation.

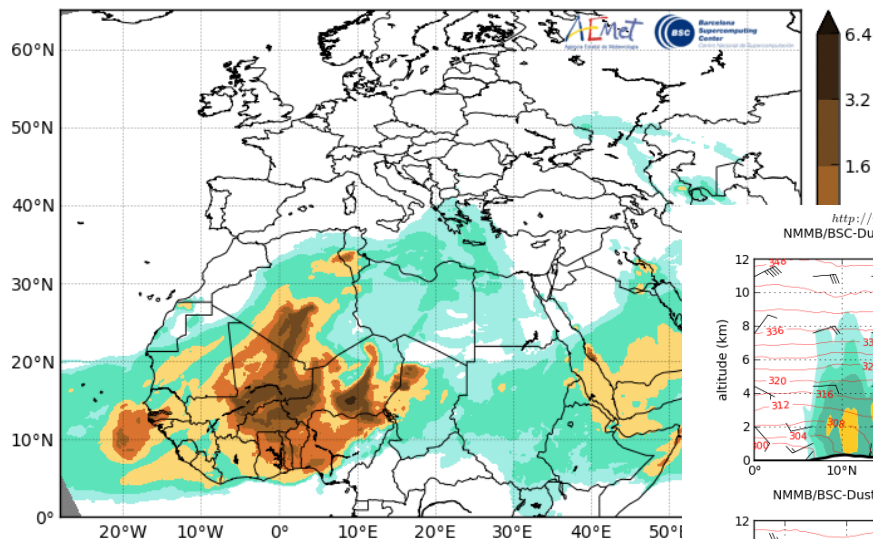

- Our users don't really know where the data is
 - With internal THREDDS server we can mix storages
 - We can use other features
- Drawback
 - Data has to be stored with a precise format (data and metadata)
 - A technician working exclusively with data

- A python package, MapGenerator for atmospheric composition visualization
 - Python and GrADS

Barcelona Dust Forecast Center - <http://dust.aemet.es/>
